

### REMARKS

The Ikeda et al. reference appears to have been cited for the first time in the Office Action dated April 21, 2005. However, a PTO-892 form listing the Ikeda et al. reference was not included with that Office Action. It is again respectfully requested that the Examiner provide such a PTO-892 form listing the Ikeda et al. reference thereon so as to insure that this reference appears as a cited reference on the front page of the patent issuing on this application.

Claims 18, 19, and 20 have been canceled, thereby obviating all of the rejections regarding same, as well as the drawing objections.

The Examiner also rejected Claims 14, 15, and 22 under 35 U.S.C. 112 as being indefinite. Claims 14 and 22 have been amended to obviate these rejections.

Independent Claim 12 has been amended to recite that the control unit moves the second control element to either (1) press against the separating wall against the bias of a spring member to close the at least one second opening in accordance with a sensed temperature detected by one or more of the secondary temperature sensors or (2) move away from the separating member to open the at least one second opening in accordance with the sensed temperature rising above a predetermined value. This structure is not believed to be shown in any of the art of record.

New independent Claim 23 defines the invention in a manner similar to independent Claim 12, except that it recites only a single secondary cooling circuit therein. For the same reason as stated relative to independent Claim 12, independent Claim 23 and dependent Claims 24 through 33 are also in condition for allowance.

Respectfully submitted,

Richard S. MacMillan  
Reg. No. 30,085
